# QUERIES & ANSWERS

THE WESTWARD DECLINATION OF

# THE MAGNETIC NEEDLE.

Effect Produced Thereby-Qualifications of Assessors-History of Oakwood Cemetery-Etc.

BUTLER'S POWDER-SHIP.

To the Editor of the Dispatch;

Please answer through your paper this question: How must a creditir proceed to collect a board bill from a United States soldier, now in fort in another State, due bill held? and oblige, SUBSCRIBER.

We do not know how.

#### Canada's Position.

To the Editor of the Dispatch: Does England derive any money revenue wise? Is the Governor-General elected by or appointed by England?

Very truly.

#### 2. By the Queen.

Life-Saving Service. To the Editor of the Dispatch: Will you be kind enough to inform me to whom I must write to get information about the life-saving stations on the coast, and what is the minimum of stature of those they will take in the service?

Write to S. Kimball, General Superintendent Life-Saving Service, Treasury Department, Washington, D. C., who will furnish you a pamphlet upon the

#### The Top Brick.

To the Editor of the Dispatch:

A bets B that the top brick in a wall ains as much weight as the lower
t. B bets A that it does not. Who
ght? Decide bet. C. E. T. is right? Decide bet. In mechanics' natural philosophy, if

we suppose the weight of the wall acting at the centre of gravity on the perpendicular line connecting a top brick with a bottom one, it will have the same sion was so great as to have broken glass in some of the windows in Wilmingbelow, pulling down the top brick and pressing down the bottom.

#### Onkwood's History. To the Editor of the Dispatch

Of whom did the city buy the Oakwood Cemetery, and in what year? XXX.

Oakwood Cemetery was bought by William Cooke from John New in 1821, and was bought by the city from Mrs. Emily C. Shore, one of William Cooke's heirs, August 20, 1854. The city's deed was recorded October 16, 1854. Oakwood contains 60 239-1000 acres, and the price paid for the same was \$10,000. The first interment was that of an infant, July 19, 1855.

#### A Cow Case.

To the Editor of the Dispatch: Bought a cow for \$30 cash and sold her for \$35 at a credit of eight months. Reckoning the interest at 6 per cent., how much did I gain? Do arithmetic says the answer is 3.6538would like to know how he makes that. answering you will oblige a constant fer. D. J. F. reader.

We find the present worth of \$55, eight months, 5 per cent, by dividing \$35 by \$1.64 and get \$33.5338 from which we subtract \$30, and get the answer, \$3.6518 for the gain. See present worth and discount in any arithmetic.

#### The Dend Sea.

To the Editor of the Dispatch: Will you kindly answer the following

1. Do fish or any living creatures exist in the Dead Sea?

2. Why is it called the "Dead Sea"?
3. What body of water contains the greatest proportion of salt? By answering the above you will reatly oblige, R. M. B.

greatly oblige, 1. There are no fish in the Dead Sea.

and no other living creatures, except some of the lowest forms.

2. It was named "Dead Sea" because animal life cannot exist in it.

3. Of large bodies of water, the Great Salt Lake, in Utah, probably contains the greatest proportion of common salt, but in total mineral matters, the Dead | respondents who ask but one question

## Real Estate Assessor.

Sea somewhat exceeds it.

To the Editor of the Dispatch: Are there any qualifications requisite to the position of Real Estate Assessor, who is appointed every fifth year by County Judge? By answering in the Weekly you will oblige many interested in this, to farmers, most important sub-

Hewlett, Va. In reply to A. M., we would say that an act of March 5, 1888, provides that their queries are not answered. "It shall be the duty of the several county, corporation, and hustings courts of the several countles and cities answered. of this State, on or before the 1st day of January in the year 1830, and every fifth year thereafter, to appoint proper persons to assess the value of all lands and low, together with the improvements thereon, within their respective counties and corporations . . . and every person appointed such assessor, shall be a resident of the county, corperation, and district for which he is

appointed." From this, it appears that the only qualification requisite for the position of Assessor of Real Estate is that the appointee shall be a resident of the county, city, and district for which he is uppointed, and, in the opinion of the Judge, is a "proper" person.

Declination of the Magnetic Needle. To the Editor of the Dispatch: A few years ago I asked the Dispatch the following question: "At what date did the North Magnetic Pole begin its ent westward movement, and when present westward movement, and when will it begin moving east again? The work I now have before me, on surveying, simply says: "This pole has been gradually moving westward for several years, and will perhaps continue to do to for several years to come." And Captain Baylor, of the State Oyster-Ground Survey, answered at the time, at your request, to the same effect; stating that "the line of 'no variation,' which runs through the North Magnetic which runs through the North Magnetic Pole, has been moving westward ever since the discovery of the Continent, and since trustworthy observations have been recorded," and so on, giving a great deal of valuable and useful information. But "J. P.," in the next issue of the Dispatch, answered almost to the contrary stating that Ciliagues details. to the contrary, stating that Gillespie did not agree in his surveying with what was said by Captain Baylor, that "in this country the north end of the needle. was moving eastward at the earliest re-corded observations, and continued to do corded observations, and continued to do so till about the year 1310, when it began to move westward, which it has gan to move westward, which it has ever since continued to do." So you are I was left almost as much in doubt as ever. I have been retracting some old land-lines in Southwest Virginia lately, and have some more to retrace soon, some of them 100, and others 120 or 140 years old. Have been a subscriber to the Dispatch almost continuously for the just eight or ten years, and would now be pleased to see something more on this subject is the columns of your valua-

ble paper. Let some of our professor of mathematics in some of our highe-institutions of learning answer. J. A. R. Paint Lick, Va., April 19, 1807.

We have gotten an official answer for our friend, as follows: United States Coast and Geodetic Survey.

Washington, D. C., April 20, 1897.
To the Editor of the Dispatch:
Referring to your letter of April 15th, asking for a reply to the query of your correspondent, herewith returned, I beg leave to say that the question is not put in such a way that it can be answered offhand, for the phenomena are very complex. I forward for your information under another cover Appendices Nos, il report for 1835; 7 for 1835; and 1 for 1835, relating to the subject. The following remarks will perhaps answer what your questioner intended to ask:

From 1879, so far as we can tell, the north end of the magnetic needle at places in the vicinity of Richmond moved toward the east (or the west declination was decreasing). until some time in the last decade of the eighteenth conture when the declination actually has in the last decade of the eighteenth cen-tury, when the declination actually bi-came east, and reached its greatest easterly decimation about 1812. At this time the motion reversed, first, of course, diminishing east declination and reducing it to zero about 1825, and from that time onward the westerly increase has been maintained with an accelerating rate at least up to about 1815. See in particular the Table for Williamsburg, page 208, Appendix No. 1, Report for 1826. Respectfully yours,

Respectfully yours, W. W. DUPFIELD, Superintendent, O. H. T. Our correspondent may have the books referred to if he will send stamps with which to mail them.

# The Powder Explosion at Fort Fisher.

To the Editor of the Dispatch: I was much interested in the account of the "explosion of the powder-ship at
Fort Fisher" in the Note and Query
column of your issue of March 14th last.
I was a member of "the Staunton Hin
Artillery," stationed on the coast, some
distance north of Fort Fisher, at the time
of the expression. In March of think it of the explosion. In March (I think it was), 1889, General Butler wrote to me for some information in regard thereto. I did not then know that the matter had been a subject of discussion. I simply wrote him all that I could remember about it. We thought it was the shock of an earthquake. The next morning we learned what it was; that the concuston; but that the fort was not hurt. was said that, being of sand mostly, the shaking up had settled this and made the fort stronger than it was be-fore. stc. I told him, further, what was of great consequence to me, that I was lying on my right side asleep at the time; that the concussion destroyed the drum right ear; that I had not heard sound with it since; but got along with left car quite well until 1876, when that ear began to fail me, and that since 1880 I had been practically a deaf man, my left ear having been seriously injured the same concussion which destroyed my right. He soon replied to the effect that "I was a rebel, and ought to have lost my head, as well as my hearing."
I sent a pleasant reply, and on April 23,
1820, he again wrote: "I wish you could give me the exact distance you were from Fort Fisher when the explosion took place. The boat was found exactly 700 ds from the northeasterly bastion of the fort, anchored in about six fathoms of water. That would be, you see, di rectly up the ocean side of the peninsula. I should like, if you can give it to me,

I then replied that I had not previously known the necessity for being exact as to distances, etc.; that I was only a private solvier at the time, took no notes of the incident, and had passed through too much since to remember anything about it very distinctly, but thought we were ten miles or more from the fort at the

access to it, you can refresh your recol-

exploded boat, the distance from it.

In one of his letters to me, Butler claimed, as you state, that the ship was improperly exploded; that, owing to the cowardice of some one, his orders were not properly carried out, and only a small portion of the powder was exploded, etc.

ALEXANDER BROWN.

Norwood P. O., April 19, 1897.

## Notice to Correspondents.

No notice will be taken of anonymous communications. In answering queries our first attention will be given to the letters of those cor-

value of old coins. For that information write to some dealer in them. We cannot undertake to answer queries by mail; we can only answer them

through this column. We are frequently called upon to republish poems and songs, but we will not undertake to do so, except where the production called for has some historical or peculiar literary merit, and is not of easy access to the average reader. Address 'Query Editor, Dispatch Office,

Richmond, Va." N. B. We do not read unsigned letters.

## Reason and Wisdom.

(Observations of a Philosophical Friend of Ours.)

"Let your reason serve, To make the truth appear when it seems

hid." Inasmuch as reason is the endowment that distinguishes as from the lower animals and asserts our kinship to higher beings, we naturally make a great deal of it. It is the active testing, Gas Tubing, patent ends, per foot... that distinguishes as from the lower judging faculty within us, by which we intelligently receive, appropriate, and use the light and knowledge obtained through our senses. We see, hear, feel, smell, and taste, and draw our conclusions as to what has been suit; the divine condition of life. Don Quixote tells Sancho Panza that the stomach is the laboratory of the whole body. And, when you come to think of it, a man's wisdom is about the measure of his being. It embraces his judgment, his knowledge, his conscience, his feeling, and his loyalty to God, his life and happiness, his whose nature. And just happiness, his whole nature.

are largely identified in their operations,

are largely identified in their operations, as well as in their votabulary. Read, mark, learn, and inwardly digest is the right process in the one case, and is the other masticate, appropriate, assimilate, and inwardly work up is the process. The excellency of knowledge is that wisdom giveth life to them that have it. The perfection of eating is that food gives to the body healthy blood, which is the life thereof.

The five senses are the doors and avenues through which knowledge of the outside world reaches the brain, the presence chamber of the soul. We can not say what offices they also fill for the stomach in giving life to the body. The office of reason, in turning observations and knowledge into wisdom, is very suggestive of that which the gastric juice in the stomach performs in turning its acquisitions into blood and life. Juice in the stomach performs in tur-its acquisitions into blood and life.

Who knows the intimacy of body and soul? Is it a wonder that the tabernacie of the flesh should reveal and illustrate secrets of its wonderful possessor-

Good and joyous health makes the strength and power and energy of the giant who rejoices to run a race. And knowledge that is turned into light and loyalty makes the wisdom of the wise man, whose ways are ways of pleasant-ness and all his paths peace.

Strength and health is a grand result; and wisdom strengtheneth the wise man more than many mighty men a city. The service that the stomach and its juices do for the physical man are dependent upon its own soundness and purity and health; and the service that reason does for the soul is dependent on its health and soundness. A stomach with its juices is a s.omach, whether it is healthy or disease; and reason is reason, whether it be right or disordered. People have been known to say, they wished they had no stomach or liver, because they give them so much trouble. And so men have been known almost to wish they had no reason, be-A stomach may be thoroughly diseased and reason may be thoroughly

"Magna pars libertatis est bene moratus venter." A great and most im-portant duty of life is to make and keep a sound and healthy stomach; and a most important duty is to make and

Mere stomach and appelle cannot be depended on for health and strength. And mere reason and fancy cannot be depended on to give us it ht and judg-ment and strength to make us wise. It is as absurd to exalt and defy mere reason as it is to exait and defy mere stomach. The dignity, merit, and reliability of reason depends on its health and soundness. Neitner strong reasons nor strong stomachs are guarantees of life. Neither reason nor conscience are absolutely safeguards. The uncertainty absolutery safeguards. The underlainty of both imply a higher and controlling influence—that is, to make them what they should be, avert the consequences of their irregularities, and shape our ends in spite of them. There is no such thing as ideal reason in humanity. We ware hore for it, but without it. The were born for it, but without it. The idea of it is the Divine instinct; the craving it is the thirst for the living God. God is light. Without Him our case is hopeless. If the blind lead the blind, both fall into the ditch. The great work and blessing of the Word of God is to rectify the judgment, to make the reason sound, and purify the heart that controls all. If the eye is single, the whole body is full of light; and its singleness, simplicity, and justness come are to keep with all diligence, as out of

It are the issues of life.

The wisest man is he whose whole being is most in obedience to ideal reasonlogic and familiar with syllogisms, but exploded boat, the distance from it. In the report of the Secretary of the Navy for 18.5 there is a plan of the fort and of the situation of the powder-boat. Per-haps, by looking at that, if you have who, in the fear of God, does His will from the heart: consciously and intelligently, living, moving, having His being in Him. The worship of divine manhood is a most reasonable service. In the person of Jesus Christ we worship Ideal Reason-Infinite Wisdom.

ANNUAL STATE CONVENTION TO BE HELD NEXT SATURDAY.

IMPORTANT LEGISLATION LOOKED FOR

Achievements and Personnel of the Local Post-Work of the National Association-Mr. C. W. Saunders the Next State President.

The annual convention of the Travellers' Protective Association of America, Virginia Division, will be held in this city next Saturday, May 1st. The members of Post A, of this city, anticipate a large attendance, and are making preparations to give the delegates a hospitable recep-

The convention will be held in the assembly-room of the Chamber of Commerce at 10 o'clock A. M. Saturday. Much important work will be done at this convention. Delegates will be elected to the National Convention, to be held in Nashville, Tenn., June 1st, and instructions given them as to the various questions that will come up for discussion at that time, and also as to their vote on

(President of Post A.) the amendments to the National consti-tution and by-laws. Work will also be cut out for the Legislative Committees. garding the bills now before Congress, for the establishment of a department of commerce at Washington, for a legation building in the City of Mexico, and the Torrey bankrupt bill; also, the securing of concessions by the railroads through the State Legislature, secured by the Legislatures of other States. The Travellers' Protective Association

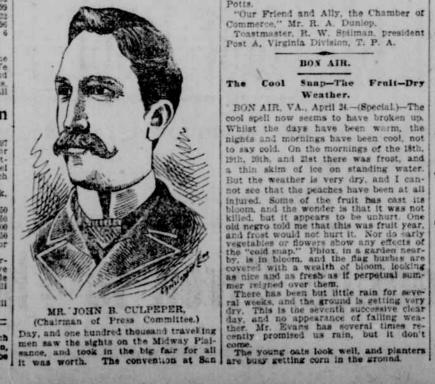

travelling men and the jobbers and man-ufacturers; they succeeded in getting two-cent mileage from the Chesapeake and Ohlo Rallway Company and its west-Lockett. chairman; Press Committee. connections; also, from the Scaboard Air-Line, and are now endeavoring to get a five-thousand two-cent ook, interchangeable over all the southrn, eastern, and western lines, They have inaugurated an enterprise for the city of Richmond, which is about to be onsummated-the clothing manufacturewhich will enable merchants coming to Richmond to buy their clothing here instead of going to Baltimore, Philadelphia, and other large cities. The Travellers' Protective Association are having the hearty co-operation of the Chamber of Commerce in this enterprise.

NATIONAL ASSOCIATION'S WORK. The National Association has done very effective work all over the United States in the way of securing railroad concessions in passenger rates and excess bag-gage rates, and facilities to the travelling men generally, and comforts and conventmen generasy, and converts and conveni-ences to them by the hotels throughout the country. One of the largest western passenger associations within the last year saw fit to withdraw their two-cent mileage from the travelling men, but through the persistent efforts of the National Association, they were induced

MR. C. W. SAUNDERS. Protective Association.)

to put it on sale again. The railroads introduced a bill in the last Georgia Le-gislature, to the effect that no one outside the railroads could sell railroad tickets, but the active efforts of the National Association defeated the scheme. gathering together of the travelling men at their national convention is an event looked forward to with great pleasure and interest, and the meetings are always largely attended, and no means are spared to make the visiting "knights of the grip" enjoy themselves. National conventions have been held in the last ten years at Denver, Col., Little Rock, Ark., Milwaukee, Wis., Peoria, Ill., San Antonio, Tex., Tere Haute, Ind., and the next one will be in Nashville, Tenn., on June 1, 1897. When the convention was at Peoria, Ill., the World's Fair was in progress at Chicago, and the delegates went from Peoria to Chicago, arriving there Travellers' Protective Association

Antonio, Tex., will long be remembered, as the delegates took a trip to the City of Mexico, had an audience with President Diaz, of the Mexican republic, drank Pulque, and ate hot tomales, saw the builfights, and all the amusements incident to a visit to our sister republic. to a visit to our sister republic.
